

**SUB-COMMITTEE ON PEER REVIEWS**

**Motivating and equipping SAIs  
to carry out peer reviews**

# IT(A)SA in Peer Review Mode

---

## Motivating and equipping SAIs to carry out peer reviews

Bernhard Hamberger  
Head of Competence Center IT Audit  
Swiss Federal Audit Office

# Agenda

- IT(A)SA in ISSAI 5600
- What is an IT(A)SA?
- Why is an IT(A)SA important for a SAI?
- How does an IT(A)SA work?
- Conclusion

# IT(A)SA is part of ISSAI 5600

## Peer Review and Self Assessment

- 3.18. *Due to the nature of the peer review process and the likely publicity given to its findings, the SAI could consider preceding the peer review with a self-assessment and initiate remedial actions before the review takes place. There are different self-assessment tools available (see table). A self-assessment can also be a useful means to help the SAI determine the focus of the proposed peer review. The peer review can then include an assessment of the adequacy of the corrective action being taken following the self-assessment.*
- 3.19. *A SAI can also refer to the results of recently completed internal assessments, inspections and control measures it has undertaken to monitor progress and implementation, or for quality control purposes. The results of these assessments can provide additional relevant input for use when defining the focus and scope of the peer review.*

# ITSA & ITASA in Peer Review Mode

Examples of tools that can be used for self-assessment and as a basis for peer reviews by SAIs:

## ***IT Self-Assessment (ITSA)***

The IT self-assessment tool (developed by EUROSAI IT Working Group) aims to:

- contribute to the work of SAIs by ensuring the quality and performance of the SAI's own information technology (IT) environment and by promoting awareness of IT governance;
- develop the capacity of SAIs to meet their strategic goals through the use of IT (e.g. in relation to internal management, through more effective audits and by developing the skills of staff).

Refer to [www.eurosai-it.org](http://www.eurosai-it.org)

## ***IT Audit Self-Assessment (ITASA)***

- The ITASA (also developed by EUROSAI IT Working Group) assesses the current and future maturity of the IT audit function in the form of a workshop setting. ITASA is not a performance evaluation though it provides an efficient evaluation of the current and desired *status quo* of IT audit as perceived by participants.

Refer to [www.eurosai-it.org](http://www.eurosai-it.org)

# Essence of IT(A)SA

- Set of simple and standard actions to identify improvements according to needs of the SAI
- Focused, pragmatic and impact-oriented approach
- Moderated Self-assessment
- Developed by EUROSAI ITWG

# Why a Self-assessment?

- It allows for «proximity»  
The evaluation is carried out by people:
  - who know the subject
  - who are interested in solving the problems
- It is confidential
- The organisation is in control of the results of the evaluation and their distribution. A self-assessment is not an audit or a peer review
- The external moderation encourages participants (members of staff) to express themselves freely

# ITSA

---

## IT Self-assessment - Approach

Bernhard Hamberger  
Head of Competence Center IT Audit  
Swiss Federal Audit Office

# WHAT IS AN ITSA

# The objectives of an ITSA

- Give preliminary answers to these questions:
  - How can the use of IT support the capacity of your SAI to meet its strategic goals?
  - Does the SAI have the required level of IT to support audit business?
  - How can we improve the level of IT audit support?

# Potential outcome

- Provide Management with insight about the current state of the IT support for their business processes
- Helps positioning IT for the challenges ahead
- Offers a platform for enabling close contact between users and IT specialists of a SAI
- Identify cultural and organisational obstacles to achieve standardisation of business processes and applications

# WHY IS AN ITSA IMPORTANT

# An ITSA helps you to ...

- be an example for your auditees
- work effectively and efficiently
- not to waste money

# HOW DOES AN ITSA WORK

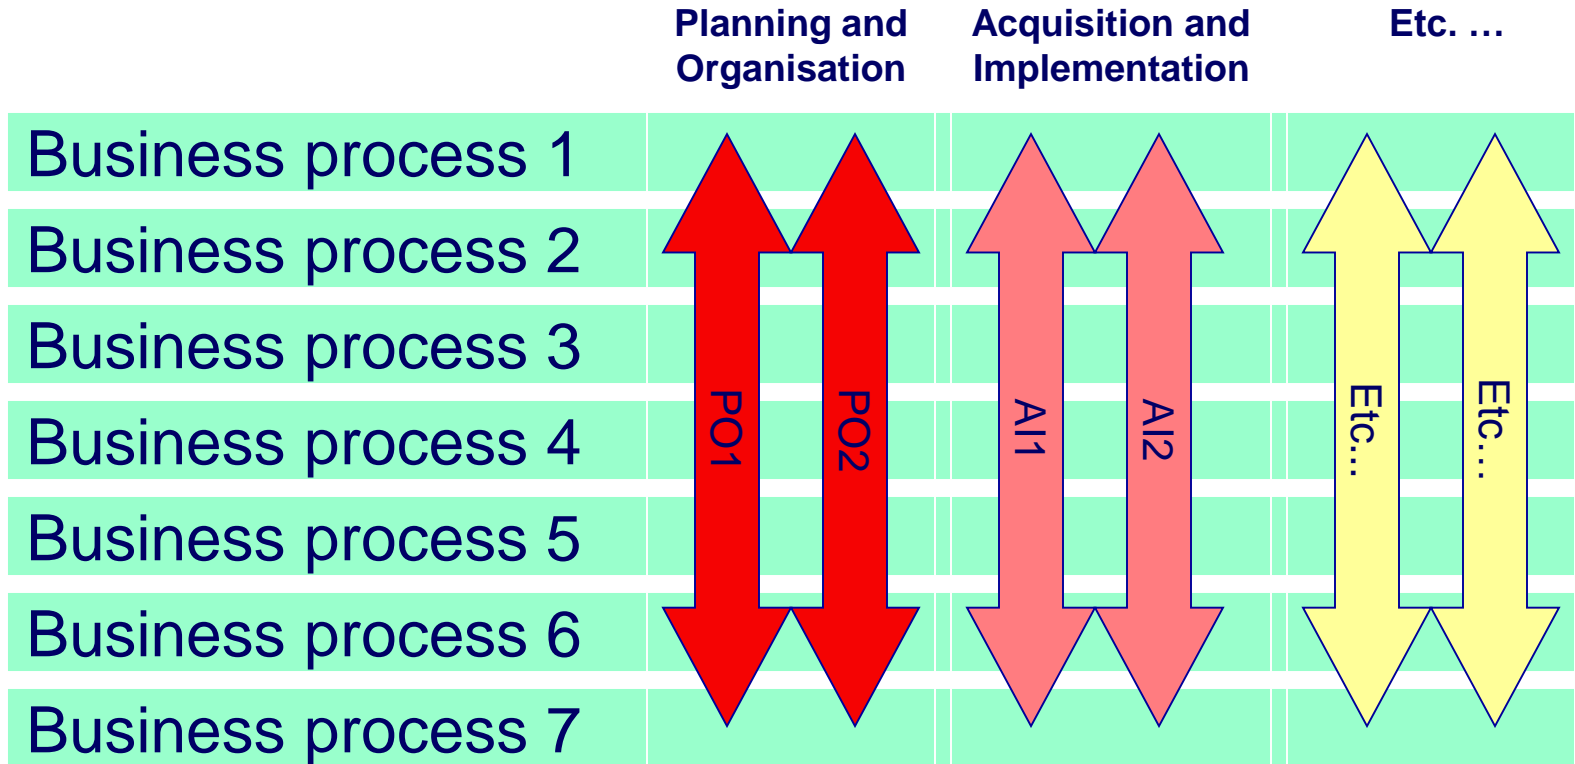

# Steps

- Participants assess the maturity of the IT contribution to achieve the SAI's strategic goals
  - Most important business processes and how they are supported by IT
  - Most important IT processes and their maturity
- «Gaps» are converted into actions
- The suggested action plan is presented and submitted to the Executive Management of the SAI
- Re-performance of the ITSA after 3 years

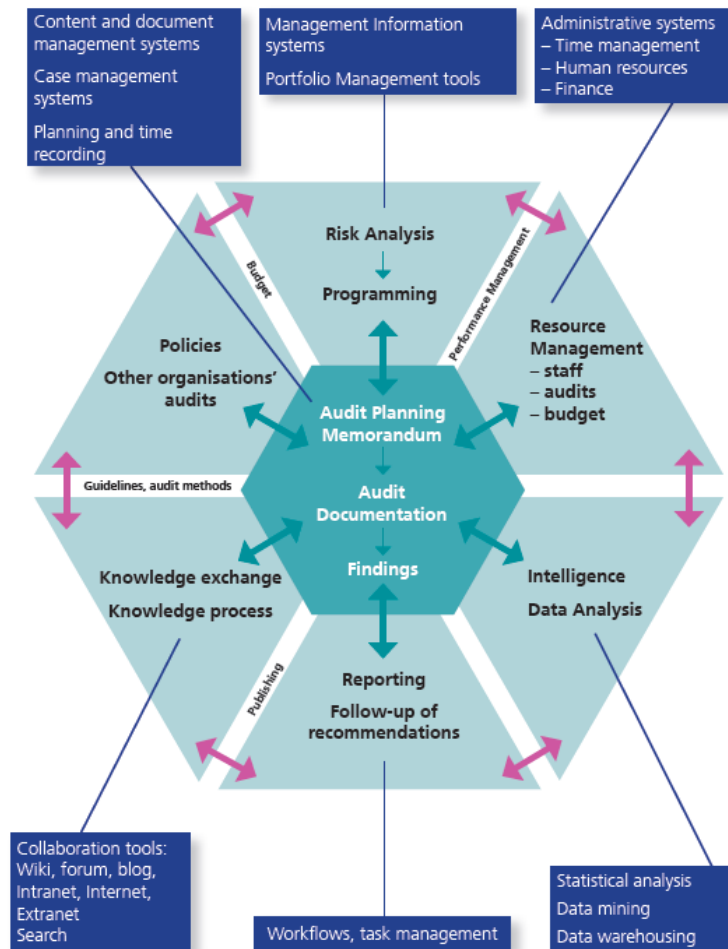

# Two dimensions considered

Second dimension = IT

First dimension = Business

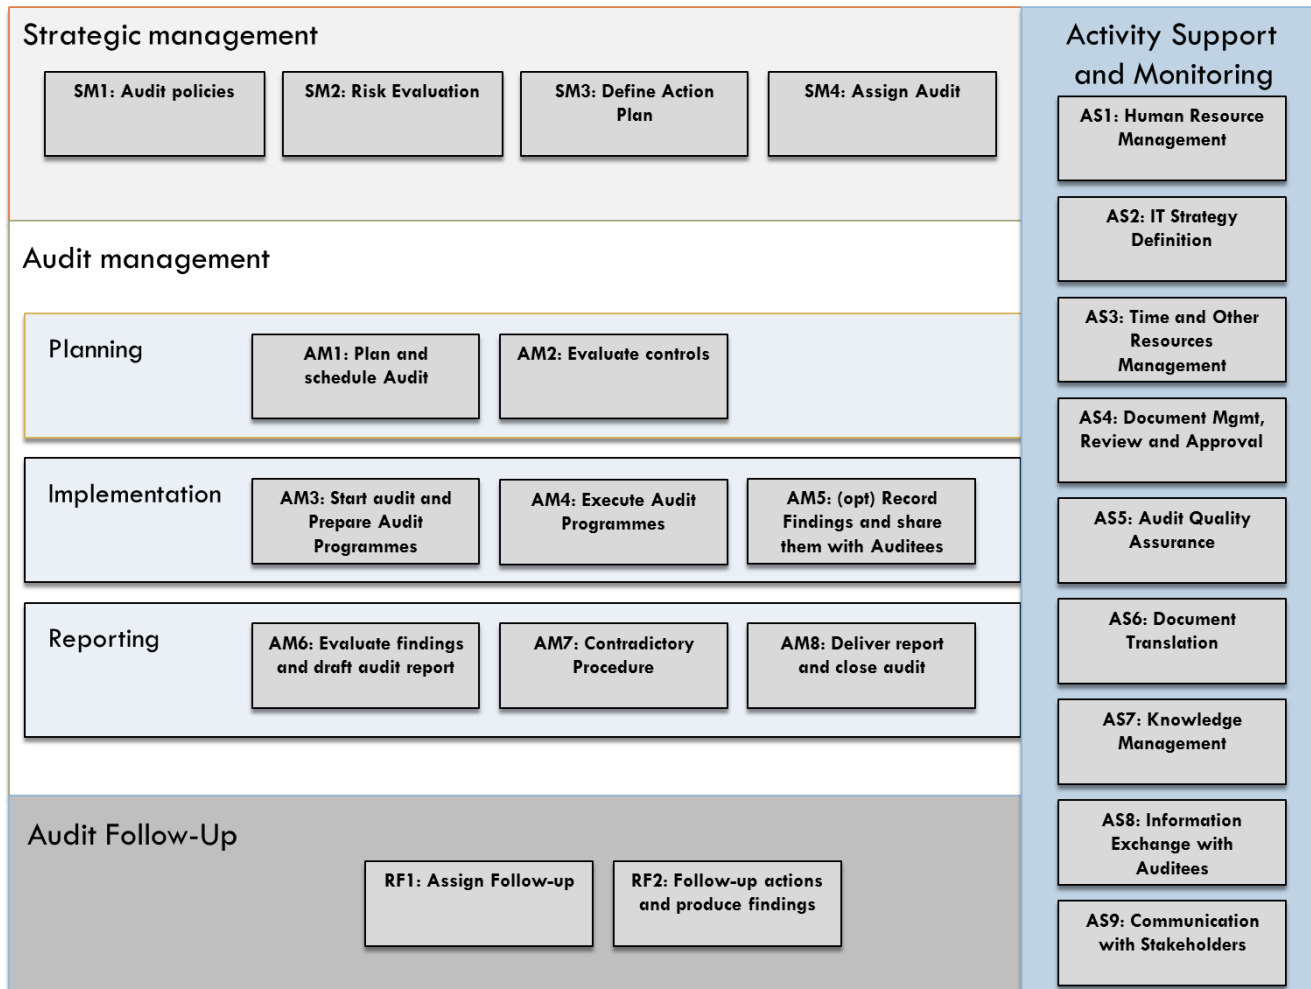

# Business areas covered by ITSA

# ...or in terms of ISSAP

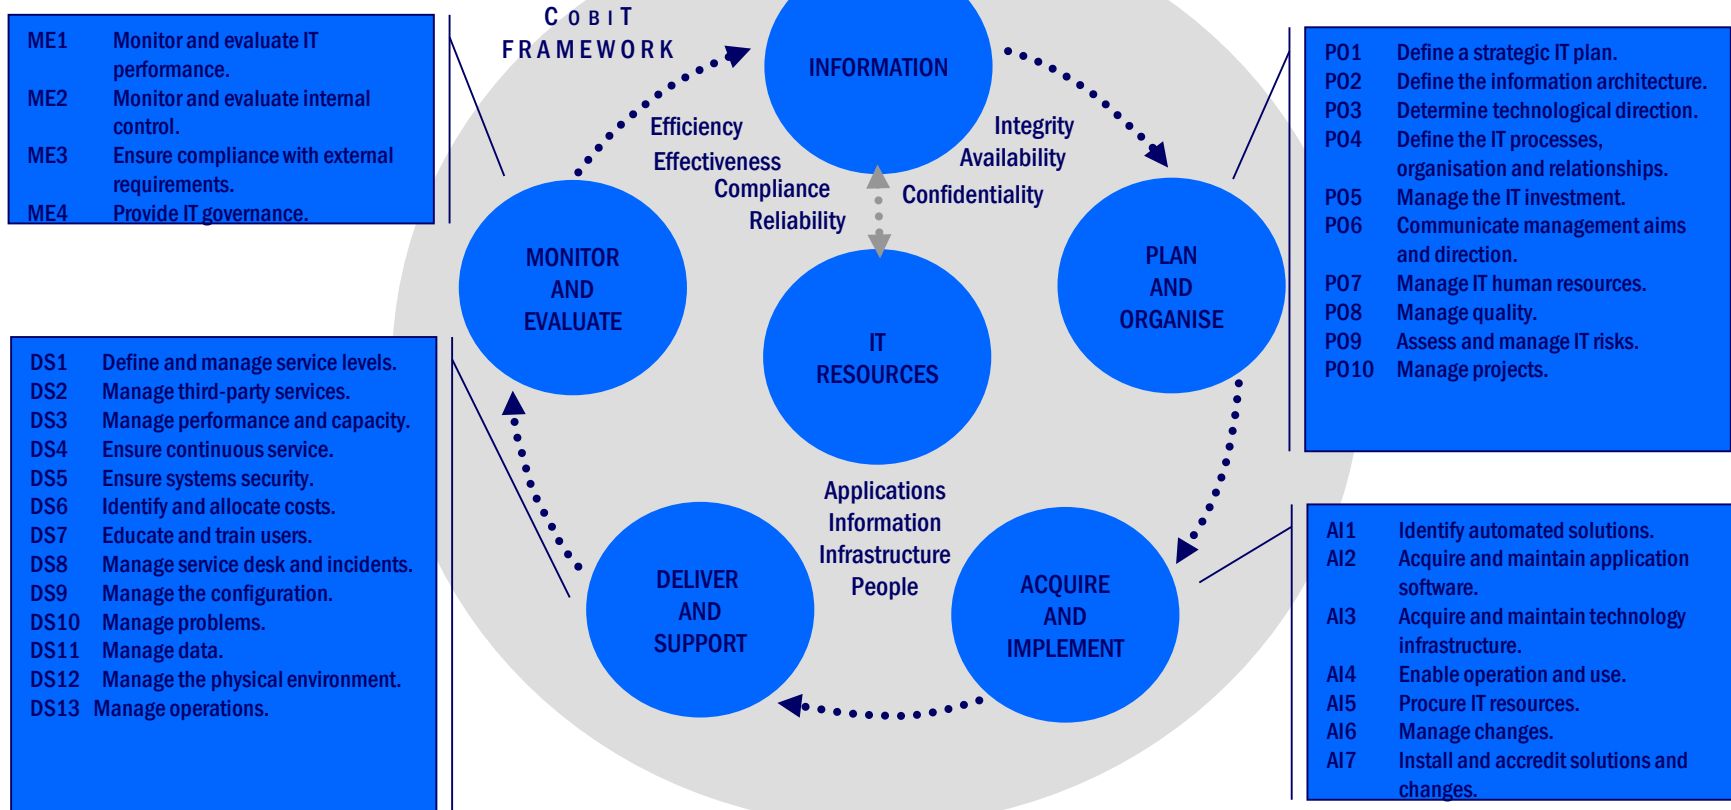

# Business dimension questionnaire

What is the importance of the current IT systems for this business process?					What is the importance of the future IT systems for this business process?					Business added-value chain (BVC) Form 1. Does the IT help to achieve the SAI's strategic goals?					What is the quality of the current IT systems ?

# Workshop Structure

- Workshop with a group of up to 20 persons from different disciplines within a SAI
- IT and users represented
  - Different people from IT (CIO, helpdesk, development, IT project manager)
  - Users from all business areas and from different levels of hierarchy
- Investment: 1 ½ - 2 days
- (Co-)Moderators from other SAIs

# ITASA

---

## IT Audit Self-assessment - Approach

Bernhard Hamberger  
Head of Competence Center IT Audit  
Swiss Federal Audit Office

# WHAT IS AN ITASA

# The objectives of an ITASA

- Preliminary answer to two questions
  - Does the SAI have the required level of IT audit?
  - How can we improve the level of IT audit?
- Additional objectives
  - Define the appropriate level of IT audit according to the audit strategy of the SAI and its mission
  - Increase the awareness of management and auditors of IT audit
  - Identify potential improvements and set up an action plan

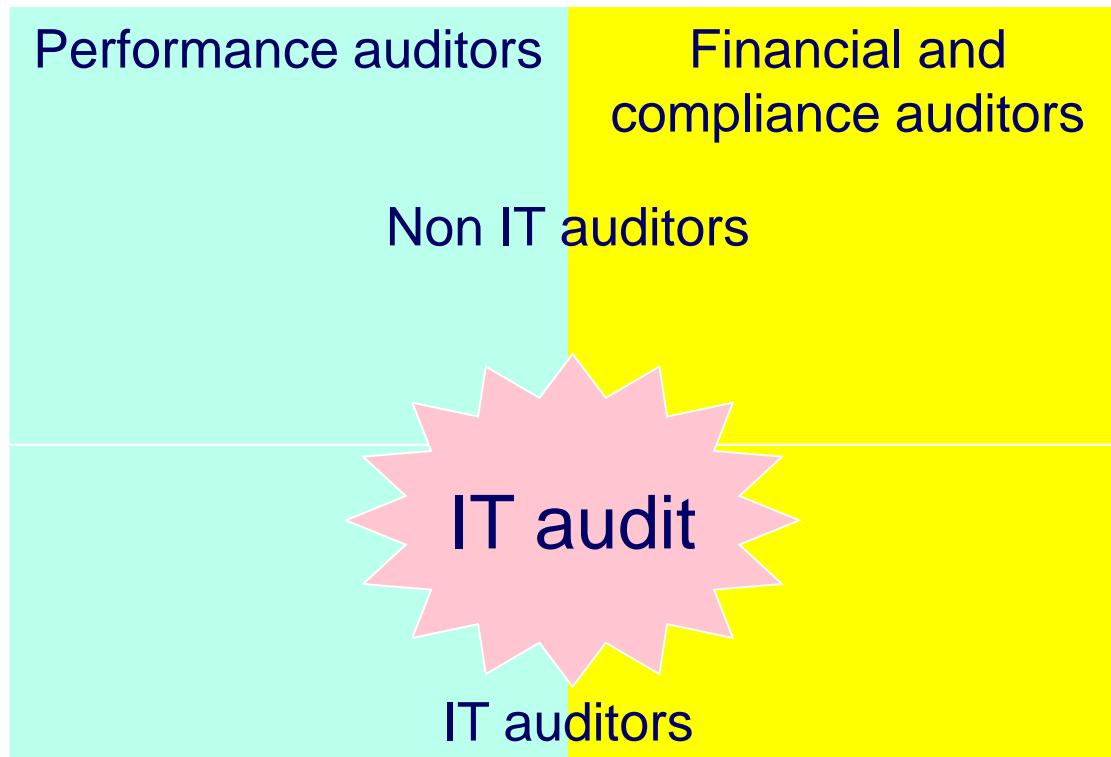

# Potential outcome

- Suggested volume, extent and alignment with traditional audit activities
- Advice on methodology, current and expected competence of IT auditors and their training
- Strategies for embedding IT Audit into existing organisational structures of a SAI

# WHY IS AN ITASA IMPORTANT

# IT Audit is an element of all audit types

# Financial Audit

(according to ISA 315,330 and ISSAI 1315, 1330)

# Performance Audit

(ISSAI 300)

- Business case for IT projects
- Evaluation of the need for an IT investment
- Strategic alignment of an IT investment
- Implementation of Open Source software
- User satisfaction with application or services
- IT procurement strategy
- Costs and quality of service for different sourcing models
- IT Architecture governance
- IT Strategy development
- ...

# Compliance audits

(ISSAI 400)

- IT Governance, IT Operations
- Compliance with project management guidelines
- IT Procurement compliance
- Cyber Security compliance
- Business Continuity Management
- Data Protection compliance
- Archiving laws
- Compliance with laws, policies, procedures,...
- ...

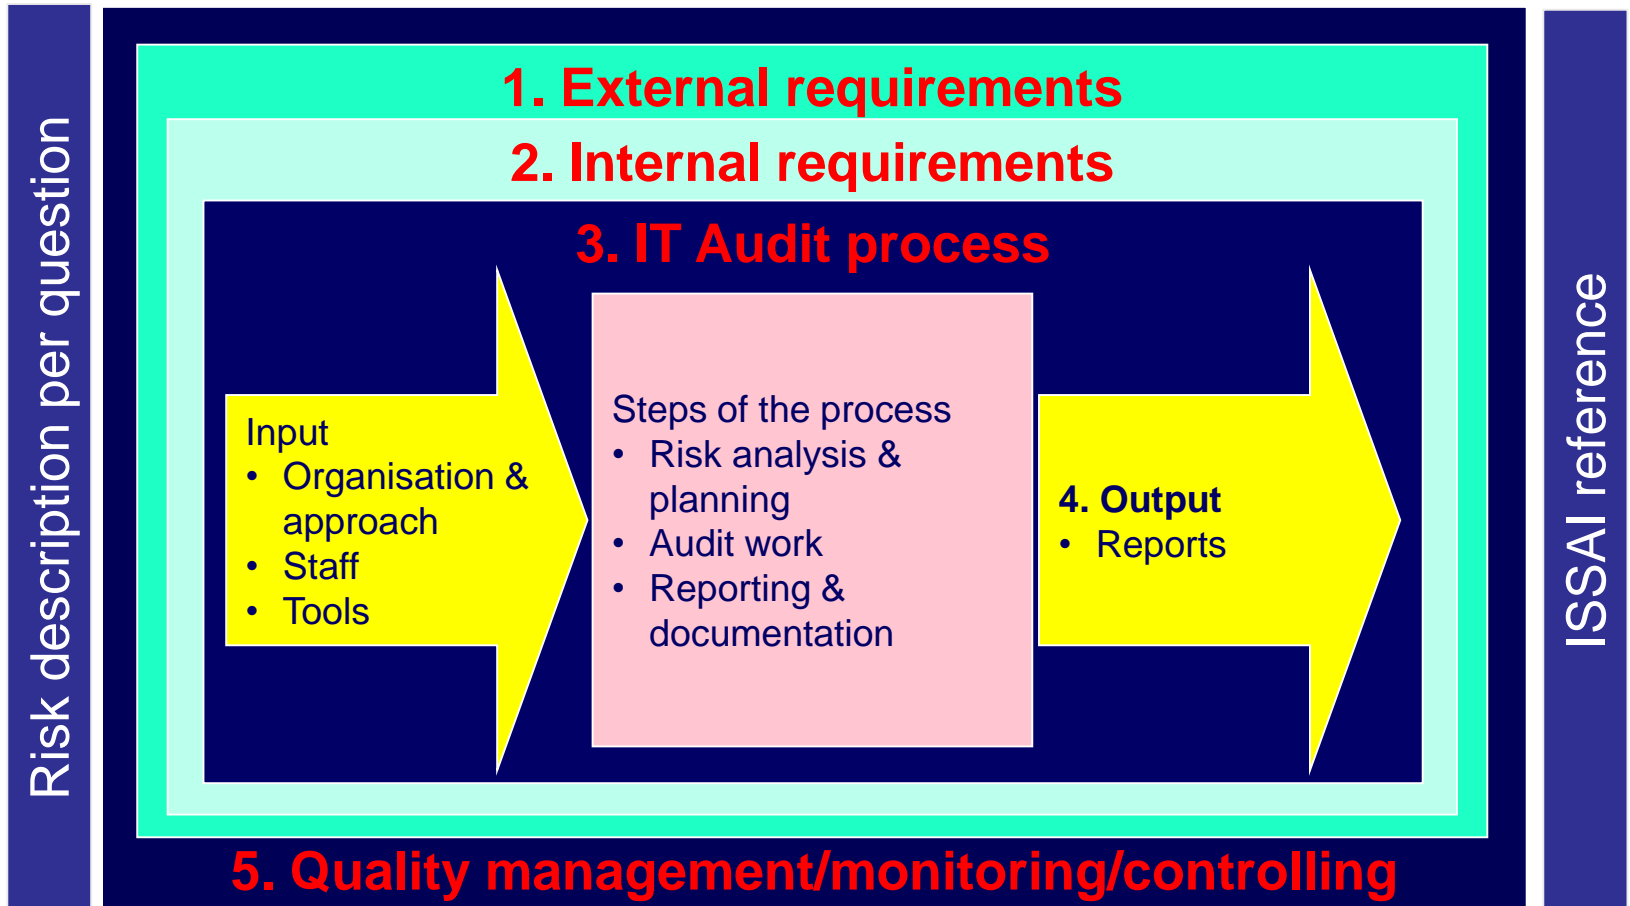

# HOW DOES AN ITASA WORK

# Steps

- Participants assess current and future maturity of the IT Audit function
- «Gaps» are converted into actions
- The suggested action plan is presented and submitted to the Executive Management of the SAI
- Re-performance of the ITASA after 3 years

# Five areas to assess

# Workshop Structure

- Workshop with a group of 15-20 staff members from different disciplines within a SAI
- Investment: 1-1 ½ days
- (Co-)Moderators from other SAIs

# CONCLUSION

# Conclusion

- SAI could consider preceding a peer review with a self-assessment and initiate remedial actions before the review takes place
- Through an IT(A)SA **measurable improvements** can be achieved in IT Support for a SAI or in IT Audit Capability

And

... an IT(A)SA is only the beginning  
– not the end
